SUMMARY

Software Engineer with over 3 years of experience designing and building scalable web applications, backend services, and AI-powered products using .NET Core, React.js, and Next.js. Skilled in clean architecture, microservices, messaging systems, MCP integrations, third-party data synchronization, and secure API development. Passionate about building purposeful software that supports business goals, improves operations, and delivers practical value to real users.

EXPERIENCE

Software Engineer

11/2025 – Present | Maadi, Cairo, Egypt

Flairstech

- Develop scalable software solutions within an agile team using clean architecture and modern engineering practices.
- Build AI-powered tools and MCP-based integrations to automate workflows and extend application capabilities.
- Integrate and synchronize data with third-party applications through reliable API communication.
- Contribute to a microservices-based application, including service communication, messaging systems, and asynchronous workflows.
- Improve system performance, reliability, and maintainability across evolving project requirements.

Fullstack Developer / .Net - React - NextJS

07/2023 – 10/2025

Developer

New Cairo, Cairo, Egypt

Digi Crafterz

Collaborated with backend, frontend, and DevOps teams to design, build, and maintain **multiple scalable web systems and APIs** across various projects. Focused on delivering high-performance, secure, and maintainable backend solutions.

Key Achievements:

- **Developed and optimized RESTful APIs**, improving data flow efficiency and system reliability across several platforms.
- **Integrated real-time notifications** with frontend systems using WebSocket and API-based communication.
- **Implemented secure authentication and role-based access control (RBAC)** to ensure data protection and system integrity.
- **Optimized database performance**, reducing query response times by up to **30%**.
- Contributed to **code reviews, unit testing, and deployment troubleshooting**, ensuring production stability and code quality.

Backend Developer / .Net / Parttime

03/2025 – 08/2025 | Remote

Madarj

Collaborated with backend, frontend, and DevOps teams to design, build, and maintain scalable web applications and APIs.

Key Achievements:

- Developed and optimized **RESTful APIs**, enhancing data flow and system performance.
- Integrated **real-time notifications** with the frontend via WebSocket and APIs.
- Implemented **secure authentication and role-based access control (RBAC)**.
- Optimized **database performance**, reducing response time by up to **30%**.
- Contributed to **code reviews, unit testing, and deployment troubleshooting**.

PROJECTS

AIMY – AI-Powered Services Platform

Contributed to the development of AIMY, FlairsTech's proprietary AI-powered services platform, designed to streamline operations, enhance productivity, and support intelligent automation across business workflows.

Key Achievements:

- Worked on a clean architecture and microservices-based system to improve scalability, maintainability, and separation of concerns.
- Built and enhanced AI-powered tools and MCP-based integrations to support intelligent workflow automation.
- Integrated third-party applications and implemented reliable data synchronization across internal and external systems.
- Worked with messaging systems to enable asynchronous communication, background processing, and event-driven workflows between services.
- Contributed to backend services supporting AI helpers, knowledge retrieval, data processing, and operational automation.

Real Estate Evaluation Management System

Developed a **dynamic property evaluation platform** that generates accurate price estimations based on user-input data and location factors. The system featured **role-based access** and **hierarchical approvals** to ensure secure, efficient workflow management.

Key Achievements:

- Built **dynamic forms** that adapted to property details for precise valuation results.
- Implemented **multi-level role-based access** for data entry, review, and approval stages.
- Streamlined **workflow and reporting**, improving accuracy, transparency, and decision-making.

MyAPA Health - Medical App

Led the integration of **AdvancedMD**, a leading healthcare management platform, by developing **custom APIs** for real-time patient data synchronization. The system enhanced data accuracy, reduced manual entry, and improved access to organized medical records for healthcare professionals.

Key Achievements:

- Built **real-time API integrations** with AdvancedMD to synchronize and retrieve patient data securely.
- Reduced **manual data entry errors** and improved data consistency across systems.
- Designed **structured data models** for efficient storage, retrieval, and management.
- Improved **healthcare workflow efficiency**, enabling quicker and more reliable access to patient information.
- Ensured **HIPAA-compliant** data handling and secure API communication.

IWingo – Educational Platform

Developed an **interactive educational platform** for teaching English through short, engaging lessons. Built with **Next.js** (frontend) and **.NET Core** (backend) to ensure high performance, scalability, and a smooth user experience.

Key Achievements:

- Delivered **interactive learning content** to boost engagement and retention.
- Integrated **Stripe** for secure subscription and payment processing.
- Implemented a **free trial system** to enhance user onboarding and conversion.
- Designed a **user-friendly interface** accessible to learners of all ages.

Digitization project for contracting works in the holy sites

Contributed to the development of a **digital platform** that automates contracting workflows for **construction and maintenance operations** in the Holy Sites.

Key Achievements:

- Built **RESTful APIs** and **frontend components** using **.NET Core** and **React.js**.
- Integrated **ArcGIS** for spatial data visualization and **geolocation** of project sites.
- Streamlined **document tracking, contractor management, and approval processes**.
- Ensured **security, scalability, and performance** across all system components.

GCC Customs Union Authority

Contributed to the **backend development** of a regional customs management system that enhanced tariff operations and data accessibility across GCC countries.

Key Achievements:

- Developed **high-performance APIs** using test-driven development for scalable data processing.
- Integrated **AI-driven features**, including a **chatbot** for faster and smarter tariff data retrieval.
- Improved **customs workflow efficiency**, enabling quicker and more accurate tariff management and cross-border operations.

SKILLS

.NET Core	React js	Next.JS	IIS
GCP	AWS	Sass	Bootstrap
Git	S3 Bucket	Tailwind CSS	JQuery
JavaScript	ECS	SQL	OOP
SOLID Principles	EC2	Design Patterns	Clean Architecture
CQRS	Github	SOAP	DDD
Qdrant	TypeScript		TDD
	RESTful APIs		EDD
	Material UI		Postgres DB
	SQL Server		

LANGUAGES

English		Arabic	
Japanese			

EDUCATION

Frontend Web Diploma <i>IT Sharks</i>	09/2022 Giza, Egypt
CS50: Introduction to Computer Science <i>Harvard University</i>	01/2022
Bachelor's Degree in Computer Science <i>Higher Institution for Computer Science and Information system of 6th October</i>	07/2023 6th October City, Egypt
